

INTERNATIONAL PRELIMINARY EXAMINATION REPORT

(PCT Article 36 and Rule 70)

REC'D. 2 1 MAY 2004

| Applicant's or agent's file reference PPT 130WOD | | | | WIPO PCT |
|--|---|-----------------------------------|------------------------------|--------------------------------------|
| International application No. International filing date (day/month/pear) Priority date (day/month/pear) 19.04.2002 | Applicant's or agent's file reference | FOR EURTHER ACTIO | N See Notification of Tra | nemittel-of-international |
| International application No. POPCTGB 0301545 09.04.2003 | IP/P7130WOD | FOR FURTHER ACTION | Preliminary Examination | on Report (Form PC1/IPEA/416) |
| International Patent Classification (IPC) or both national classification and IPC H04N7/26 Applicant QINETIQ LIMITED 1. This international preliminary examination report has been prepared by this International Preliminary Examining Authority and is transmitted to the applicant according to Article 96. 2. This REPORT consists of a total of 5 sheets, including this cover sheet. This report is also accompanied by ANINEXES, i.e. sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rulo 70.16 and Section 60 of the Administrative Instructions under the PCT). These annexes consist of a total of sheets. 3. This report contains indications relating to the following items: | No. 1 and the step No. | International filing date (davim | nonth/year) Priori | ty date (day/month/year) |
| International Patent Classification (IPC) or both national classification and IPC | | | 19.0 | 4.2002 |
| Applicant QINETIQ LIMITED 1. This international preliminary examination report has been prepared by this international Preliminary Examining Authority and is transmitted to the applicant according to Article 36. 2. This REPORT consists of a total of 5 sheets, including this cover sheet. This report is also accompanied by ANNEXES, i.e. sheets of the description, claims and/or drawings which have been amended and are the basis for this report and/or sheets containing rectifications made before this Authority (see Rule 70.16 and Section 607 of the Administrative Instructions under the PCT). These annexes consist of a total of sheets. 3. This report contains indications relating to the following items: | | | | |

INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

Re Item V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

1. State of the art:

The prior art document D1, US 2001/024529 A1 (CHAO HONGYANG ET AL) 27 September 2001 (2001-09-27) was cited in the application and describes a similar system and method for integer wavelet transform of colour images, also disclosing colour transforms between different colour spaces before the wavelet transformation is conducted. It already discloses the suppression (discarding) of such wavelets coefficients, which fall below a certain threshold as defined in claim 1 excluding the last paragraph g) of this claim.

2. Difference to the prior art, statement of the objective problem and solution

The difference between claim 1 and the prior art is the discarding of such wavelet coefficients which both correspond to image areas of relatively lower importance and which are below the threshold. This solves the objective problem of improving the compression efficiency and the efficiency of the compression calculation, because different degrees of compression and the discard operation can now be applied to different areas of importance at the wavelet level (discarding is based on two criteria, i.e. both the relative importance and threshold comparison).

A different level of compression is conducted for areas according to their relative importance, thus a low (e.g. zero) degree of compression in areas of an colour image of relatively higher importance. The suppression (discarding) of a wavelet coefficient is performed in accordance to both its value (below or above a threshold) and the relative importance corresponding to image areas, the application assesses individual wavelets on the basis of these two criteria instead of making decisions in different domains as disclosed in the prior art D1.

INTERNATIONAL PRELIMINARY **EXAMINATION REPORT - SEPARATE SHEET**

3. Conclusion

No prior art document suggests or hint at the problem of improving the compression efficiency and efficiency of compression calculation by combining the thresholdapproach (to discard small coefficients) with the relative-importance criterium in the wavelet discarding step, therefore the claims appear to fulfill the requirements for novelty, inventive step and industrial applicability,

There are independent claims in several categories, which are corresponding. Claim 1 discloses the method and has depending claims 2 to 10. Independent claim 11 and depending claims 12 to 20 disclose a corresponding computer program with instructions to implement the method and independent claim 21 is an apparatus counterpart of the claims 11 to 20, to which all the remarks apply mutatis mutandis.
